1        **I. INTRODUCTION**

2            The Patent Local Rules require that a party's infringement contentions identify every  
3        accused product for each asserted claim and where each limitation of each claim is found  
4        within each of these accused products. Patent L.R. 3-1. Armed with this information, the  
5        accused infringer then identifies and produces documents sufficient to show the operation of  
6        any aspects or elements of any of the accused products that the accusing party identified in its  
7        infringement contentions. These procedures are carefully orchestrated to "facilitate the  
8        exchange of information between parties so that discovery can proceed in an orderly fashion . . .  
9        . The [Patent Local] Rules are designed to make discovery more manageable, and to reduce the  
10       likelihood that defendant will need to spend time and money defending products that were  
11       mistakenly included in plaintiff's contentions." *Bender v. Micrel Inc.*, No. 09-1144, 2010 WL  
12       520513, at \*3 (N.D. Cal. Feb. 6, 2010).

13            The purpose of the Patent Local Rules is thwarted where, as here, the party accusing the  
14        other of infringement ignores its obligations wholesale. In this case, Fuisz Pharma's  
15       Infringement Contentions fail to identify a single accused instrumentality capable of infringing  
16       the '612 patent, let alone provide specific information as to *how* any such accused  
17       instrumentality allegedly meets the asserted claims. Fuisz Pharma's so-called Infringement  
18       Contentions do nothing to apprise Theranos of Fuisz Pharma's theory of infringement, and so  
19       fail to meet even the most minimal requirements of the Patent Local Rules.

20            Ignoring these deficiencies, Fuisz Pharma's Opposition tries to blame Theranos for  
21        Fuisz Pharma's own failure to form a reasonable belief, prior to filing suit, that particular  
22       Theranos products meet each and every element of the asserted claims of the '612 patent. For  
23       instance, Fuisz Pharma complains that there is insufficient evidence in the public record  
24       regarding the completion dates of the clinical trials on which Fuisz Pharma bases its  
25       Infringement Contentions. But Fuisz Pharma fails even to address the evidence that Theranos  
26       cites in its opening brief—based upon the very same disclosures that Fuisz Pharma cites in its  
27       Infringement Contentions—showing that the trials were in fact completed *before* the '612  
28       patent issued. And even assuming for the sake of argument that they were not, Fuisz Pharma

1 offers no information at all about the devices allegedly used in those trials, let alone a shred of  
 2 evidence that they infringed any claim of the '612 patent.

3 Fuisz Pharma fundamentally misunderstands the law: the patentholder has the burden of  
 4 coming forward with evidence of infringement. It is black letter law that the patentholder *must*  
 5 comply with Patent Local Rule 3-1, whether or not information on accused products is publicly  
 6 available. *See, e.g., View Eng'g, Inc. v. Robotic Vision Sys., Inc.*, 208 F.3d 981, 985–86 (Fed.  
 7 Cir. 2000) (“[The accused infringer] is not required to allow pre-litigation discovery, as  
 8 requested by [the patentholder], nor is it required to allow [the patentholder] to any discovery  
 9 not approved by the Court.”); *Shared Memory Graphics LLC v. Apple, Inc.*, No. C-10-02475,  
 10 2011 WL 3878388, at \*7 (N.D. Cal. Sept. 2, 2011) (“[The patentholder] contends that the Court  
 11 should require defendants to produce discovery that would reveal whether the [] limitations are  
 12 found in each accused device. . . . This argument, however, . . . violates Local Rule 3-1(c.”).

13 Where infringement contentions are deficient, courts routinely refuse to order an  
 14 accused party to produce infringement-related discovery, and often halt discovery altogether.  
 15 *See, e.g., Bender v. Maxim Integrated Prods., Inc.*, No. C 09-1152, 2010 WL 1135762, at \*2–3  
 16 (N.D. Cal. Mar. 22, 2010). Ignoring these court decisions, Fuisz Pharma nevertheless argues  
 17 for discovery relating to infringement by claiming that *Theranos*’s affirmative claims regarding  
 18 correction of inventorship and unfair competition somehow justify discovery on that topic.  
 19 Fuisz Pharma’s argument makes no sense. First, *Theranos* has already fully complied with the  
 20 Patent Local Rules as to its own affirmative claims, as evidenced by the 271-page invalidity  
 21 contentions that it timely served on Defendants. *Theranos* has already produced documents on  
 22 which it relies and will, of course, continue to participate fully in discovery reasonably related  
 23 to its affirmative claims, including all elements as to which *Theranos* bears the burden of proof  
 24 (such as damages). But more important, Fuisz Pharma’s argument that it is entitled to  
 25 infringement-related discovery based on *Theranos*’s claims fails to address the significant  
 26 separation in time between facts relevant to those claims and those which might conceivably be  
 27 relevant to Fuisz Pharma’s infringement case. *Theranos*’s claims are based on research and  
 28 prior art that *predates April 24, 2006*—the date on which Fuisz Pharma filed the patent

1 application that became the '612 patent. In stark contrast, the information that Fuisz Pharma  
 2 alleges that it needs for its infringement claim necessarily relates to conduct *after November 2,*  
 3 *2010*, the date on which the '612 patent eventually issued. In short, there is more than a four  
 4 and a half year gap in time, and little to no subject-matter overlap, between the discovery that  
 5 the two parties seek. Fuisz Pharma's attempt to conflate the two is highly misleading.

6 **II. ARGUMENT**

7 **A. Fuisz Pharma Has Not Presented Any Viable Excuse For Its Failure To**  
 8 **Comply With Patent Local Rule 3-1.**

9 Although Theranos' motion identified specific, glaring deficiencies in Fuisz Pharma's  
 10 Infringement Contentions, Fuisz Pharma barely addresses most of them and ignores others  
 11 entirely. The arguments Fuisz Pharma does present in the Opposition are at best unpersuasive,  
 12 and more often, irrelevant.

13 **1. Fuisz Pharma Has No Evidence That Any Accused Instrumentalities**  
 14 **Were Made, Used, Sold, Or Offered For Sale *After* The '612 Patent**  
 15 **Issued.**

16 Because there is no evidence that the accused instrumentalities were made, used, sold,  
 17 or offered for sale following the issuance of the '612 patent, Fuisz Pharma cannot assert  
 18 infringement. *See* 35 U.S.C. § 271(a); 35 U.S.C. § 154; *State Indus., Inc. v. A.O. Smith Corp.*,  
 19 751 F.2d 1226, 1237 (Fed. Cir. 1985). Fuisz Pharma's accused instrumentalities are devices  
 20 that it describes as having been used in three different clinical trials that concluded *prior* to the  
 21 issuance of the '612 patent. Fuisz Pharma's Opposition specifically admits that it relies solely  
 22 on these clinical trials for its infringement allegations. (Opposition on Motion to Strike (Dkt.  
 23 No. 101) ("Opp.") at 2, 5, 15.) But as described in detail in Theranos's opening brief, the very  
 24 records on which Fuisz Pharma relies state that the three clinical trials—the Stanford Trial, the  
 25 Mayo Clinic Trial, and the GlaxoSmithKline Trial—concluded prior to November 2, 2010,  
 26 when the '612 patent issued. (See Nousek Decl. Exs. C–E (Dkt. Nos. 99-5, 99-6, 99-7).)<sup>1</sup>

27 <sup>1</sup> For example, Fuisz Pharma's evidence of the GlaxoSmithKline trial states that the study was  
 28 completed as of March 2010. (Nousek Decl. Ex. C at FUISZ000309 (Dkt. No. 99-5).)  
 Likewise, the evidence Fuisz Pharma cites regarding the Stanford Trial shows that it was

1           Incredibly, Fuisz Pharma admits that “there is no evidence that Theranos technology  
2 has changed since these studies,” and criticizes Theranos for not “proving” that the trials were  
3 completed prior to the issuance of the ’612 patent. (Opp. at 5, 16.) But Fuisz Pharma ignores  
4 that it has the burden of proof on infringement, not Theranos. *Bender v. Maxim Integrated*  
5 *Products, Inc.*, No. C 09-1152, 2010 WL 2991257, at \*3 (N.D. Cal. July 29, 2010) (“Plaintiff  
6 may not shift the burden of identifying his claims to [the defendant] in this manner.”). The  
7 *absence* of evidence as to whether Theranos has changed its technology since the clinical trials  
8 in no way supports an infringement claim. This is particularly true where Fuisz Pharma has  
9 presented *no evidence in the first instance* (in its Infringement Contentions or its Opposition)  
10 that the accused instrumentalities in fact practiced any claim of the ’612 patent, even assuming  
11 for the sake of argument that they had been made, used, sold, or offered for sale after the ’612  
12 patent issued. Because Fuisz Pharma has not identified a single accused device that could have  
13 infringed the ’612 patent, it has failed to satisfy Patent Local Rule 3-1.

14           Fuisz Pharma also argues that Theranos should be forced to produce information and  
15 documents regarding its products and clinical trials in existence prior the issue date of the ’612  
16 patent because this information might somehow show that post-issuance products infringe the  
17 ’612 patent. (Opp. at 15–16.) In support, Fuisz Pharma points to the statement in *Hoover*  
18 *Group, Inc. v. Custom Metalcraft, Inc.*, 66 F.3d 299, 303 (Fed. Cir. 1995), where the Federal  
19 Circuit suggested that pre-issuance engineering drawings and templates used to build accused  
20 products sold *after* the patent issued could be relied on to prove infringement. (Opp. at 15–16.)  
21 As an initial matter, *Hoover* predates the Patent Local Rules by several years, and has nothing  
22 to do with Fuisz Pharma’s obligations in the trial court. More important, and unlike the  
23 patentholder in *Hoover*, Fuisz Pharma’s argument ignores that its Infringement Contentions do  
24 not identify a single post-issuance Theranos product. Fuisz Pharma has not offered—and

25  
26 completed as of May 2009, (Nousek Decl. Ex. D at FUISZ000314), and the evidence Fuisz  
27 Pharma cites regarding the Mayo Clinic Trial shows that it ended in September 2010. (Nousek  
28 Ex. E at 2.) Fuisz Pharma ignores these dates and points instead to the dates on which the  
summary write-ups were last updated. (Opp. at 16.) Those dates, however, are irrelevant to  
when any of the accused instrumentalities were used.

1 cannot offer—any evidence whatsoever that Theranos made, used, sold, or offered for sale any  
 2 allegedly infringing products *after* the '612 patent issued. And Fuisz Pharma cites no cases in  
 3 which a court has allowed discovery to proceed on pre-issuance products because an accusing  
 4 party hypothetically could learn information that might support an infringement argument.

5 **2. Fuisz Pharma Does Not Dispute That It Has Admitted That The**  
 6 **Allegedly-Infringing Conduct Identified In Its Complaint and**  
 7 **Counterclaim Is Prior Art to the '612 Patent.**

8 As detailed in Theranos's opening brief, Fuisz Pharma's infringement claim and  
 9 counterclaim rely solely on a description of allegedly infringing conduct that Fuisz Pharma  
 10 admits is prior art to the '612 patent. Indeed, the description is lifted verbatim from the  
 11 "Technical Field" section of the '612 patent. (Case No. 12-cv-03323-YGR, Dkt. No. 1, Ex. A  
 12 at col. 1:49–2:7; Case No. 11-cv-05236-YGR, Dkt. No. 84, Ex. F at col. 1:49–2:7.) A patent  
 13 applicant's statement in a patent or during prosecution that the work of another is prior art is a  
 14 binding legal admission in subsequent disputes regarding anticipation or obviousness.

15 *Riverwood Int'l Corp. v. R.A. Jones & Co.*, 324 F.3d 1346, 1354 (Fed. Cir. 2003) ("Valid prior  
 16 art may be created by the admissions of the parties."); *see also Constant v. Advanced Micro-  
 17 Devices, Inc.*, 848 F.2d 1560, 1569–70 (Fed. Cir. 1988) (holding applicant bound by  
 18 concessions in specification section of patent that everything described in the patent was prior  
 19 art technology except the use of RAMs). Because the sole allegedly infringing conduct that  
 20 Fuisz Pharma has identified *outside* of its deficient Infringement Contentions is admitted prior  
 21 art to the '612 patent, it is axiomatic that that conduct cannot infringe the '612 patent either.  
 22 *See, e.g., Tokyo Keiso Co., Ltd. v. SMC Corp.*, 307 Fed. App'x 446, 451 (Fed. Cir. 2009).

23 Fuisz Pharma does not dispute its prior admission that Theranos's allegedly infringing  
 24 conduct is prior art. Instead, it argues (somewhat ironically) that Theranos "mischaracterizes  
 25 and misuses the term prior art," further stating that Theranos's argument "goes not to the  
 26 sufficiency of Fuisz Pharma's Infringement Contentions . . . but to the entirely separate issue of  
 27 *invalidity.*" (Opp. at 15 (emphasis in original).) Fuisz Pharma is confused. Its reliance in its  
 28 complaint and counterclaim on allegedly infringing conduct that it had previously admitted is

1 prior art to the '612 patent simply demonstrates that Fuisz Pharma has no basis for its  
 2 infringement claims against Theranos.<sup>2</sup>

3       **3.       A Lack Of Publicly-Available Information On Theranos' Devices**  
 4       **Does Not Excuse Fuisz Pharma's Failure To Comply With Patent**  
 5       **Local Rule 3-1.**

6       Fuisz Pharma's Infringement Contentions also fail to provide "[a] chart identifying  
 7 specifically where each limitation of each asserted claim is found within each Accused  
 8 Instrumentality." As Theranos describes in its opening brief, the Patent Local Rule 3-1(c) chart  
 9 that Fuisz Pharma provides as part of its Infringement Contentions is absurdly deficient.  
 10 (Theranos Mot. at 11–14.) Among other things, it impermissibly ignores certain asserted  
 11 claims, and many of the identified aspects of the alleged product have no logical relationship to  
 12 the claim element cited. And for most limitations, Fuisz Pharma simply recites, "on  
 13 information and belief," that the Theranos devices allegedly practice the limitation. Fuisz  
 14 Pharma's Local Rule 3-1(c) chart is facially inadequate, and its infringement contentions  
 15 should therefore be stricken. *See Shared Memory Graphics*, 2011 WL 3878388, at \*6  
 16 ("Instead, SMG simply recites the claim language and baldly asserts that the data distribution  
 17 bus is satisfied. This it cannot do."); *Network Caching Tech., LLC v. Novell, Inc.*, No. C-01–  
 18 2079–VRW, 2002 WL 32126128, at \*5–6 (N.D. Cal. Aug. 13, 2002) (holding that infringement  
 19 contentions which simply mimic claims in the patent, or are vague discussions of the claim  
 20 terms, are inadequate).

21       Fuisz Pharma seeks to excuse its noncompliance with Patent Local Rule 3-1 on the  
 22 grounds that that there is a "limited amount of information publicly available about Theranos'  
 23 products." (Opp. at 12–13.) Courts in this district and elsewhere have specifically rejected this  
 24 argument. *See Bender*, 2010 WL 520513, at \*2–3 ("Plaintiff argues that he cannot be more  
 25 specific without obtaining defendant's detailed schematics, but the Court will not permit

26       

---

  
 27       <sup>2</sup> In addition, Fuisz Pharma inexplicably points out that the clinical trials are not themselves  
 28 prior art. (Opp. at 15.) But Theranos does not argue that they are prior art. As discussed  
 above, the relevant fact is that because the trials *concluded* prior to the issuance of the '612  
 patent, the use of devices during those trials cannot infringe the '612 patent.

1 plaintiff to proceed at this point in the absence of claim charts containing more substantive  
 2 infringement contentions."); *Shared Memory Graphics*, 2011 WL 3878388, at \*7; *McKesson*  
 3 *Info. Solutions LLC v. Epic Sys. Corp.*, 242 F.R.D. 689, 694–95 (N.D. Ga. 2007) (granting  
 4 defendant's motion to compel amended infringement contentions, despite plaintiff's argument  
 5 that it could not identify each and every element of the patent-in-suit in the accused product  
 6 without discovery as to how the product works because the product is secret).

7 Fuisz Pharma is unable to point to any support for its remarkable argument that a  
 8 patentholder is allowed to ignore the Patent Local Rules it asserts that discovery could possibly  
 9 provide evidence of the existence of infringing products. Indeed, any such holding would  
 10 obviate the Patent Local Rules entirely, by improperly shifting to the accused party the burden  
 11 of establishing through discovery whether its devices practice the limitations at issue. This  
 12 Court has expressly rejected that argument:

13 Finally, [the plaintiff] contends that the Court should require defendants to  
 14 produce discovery that would reveal whether the data distribution bus  
 15 limitations are found in each accused device. [The plaintiff's] theory is that  
 16 since Defendants know what is in their devices, the Court should just make  
 17 them show their hand. This argument, however, as does [the plaintiff's] others,  
 18 violates Local Rule 3–1(c). . . . There is simply no support, in the case law or  
 19 otherwise, for [plaintiff's] request that it be excused from complying with Local  
 20 Rule 3–1(c) for certain limitations, and that instead Defendants bear the burden  
 21 of establishing through discovery whether their devices practice the limitations  
 22 at issue.

23 *Shared Memory Graphics*, 2011 WL 3878388, at \*7.

24 Pursuant to Rule 11, Fuisz Pharma was required to have a reasonable belief, *prior to*  
 25 *filingsuit*, that particular Theranos products meet each and every element of the asserted claims  
 26 of the '612 patent. *McKesson*, 242 F.R.D. at 694–95 (rejecting proposition that secrecy of  
 27 information excused insufficient infringement contentions, citing *View Engineering*). The  
 28 Federal Circuit held in *View Engineering, Inc. v. Robotic Vision Systems, Inc.*, that Rule 11  
 requires that a plaintiff be able to demonstrate “exactly why it believed *before filing the claim*  
 that it had a reasonable chance of proving infringement.” 208 F.3d at 986 (emphasis added)  
 (“A patent suit can be an expensive proposition. Defending against baseless claims of  
 infringement subjects the alleged infringer to undue costs—precisely the scenario Rule 11

1       contemplates.”). In *View Engineering, Inc.*, the Federal Circuit specifically rejected the  
2       sanctioned party’s argument that it could not have determined prior to filing its infringement  
3       counterclaim whether the accused products infringed because it had not been permitted to  
4       examine the allegedly infringing products or drawings of the products. *Id.* at 985–86.  
5       Accordingly, Fuisz Pharma cannot be permitted to file suit in which a reasonable belief of  
6       infringement is required under Rule 11 and then, as it does here, claim that information that  
7       could form the basis of a reasonable belief is available only through discovery. *See id.*

8       Fuisz Pharma cites *DCG Systems v. Checkpoint Technologies, LLC*, No. C 11-03792,  
9       2012 WL 1309161 (N.D. Cal. Apr. 16, 2012), but this opinion does not even remotely assist it.  
10      The court there ruled only that the plaintiff could *amend* its infringement contentions—which  
11      were already legally sufficient—to add *additional asserted claims* against the *already accused*  
12      products. The decision has nothing to do with our case, where Fuisz Pharma has not complied  
13      with Patent Local Rule 3-1 as to even a single product.

14      Fuisz Pharma’s reliance on *American Video Graphics, L.P. v. Electronic Arts, Inc.*, 359  
15      F. Supp. 2d 558 (E.D. Tex. 2005), is similarly misplaced. As an initial matter, *American Video*  
16      *Graphics* is flatly inconsistent with the decisions from this district and elsewhere. *See Shared*  
17      *Memory Graphics*, 2011 WL 3878388, at \*7; *Infineon Technologies v. Volterra Semiconductor*,  
18      No. C-11-06239-MMC, 2012 WL 1998440, at \*2 (N.D. Cal. June 4, 2012); *View Eng’g*, 208  
19      F.3d at 986; *see also McKesson*, 242 F.R.D. at 694–95. Furthermore, the relevant issue in that  
20      case was whether the plaintiff had provided sufficient detail in its infringement contention to  
21      map the claim elements to the accused products. *American Video Graphics*, 359 F. Supp. 2d at  
22      560–61. But here, Fuisz Pharma’s deficiency is much more fundamental: Fuisz Pharma has  
23      failed to identify *any* potentially infringing accused instrumentalities.

24      Fuisz Pharma’s excuses have been squarely rejected by courts in this district and  
25      elsewhere. Its Infringement Contentions should be stricken for the failure to comply with  
26      Patent Local Rule 3-1.

27            //  
28            //

**4. Theranos Has Not Admitted That It Infringes Any Aspect Of The '612 Patent.**

Fuisz Pharma falsely claims that Theranos has admitted that it infringes the '612 patent because Theranos intends to prove that its employees conceived of and invented subject matter claimed in the '612 patent. (Opp. at 9–12.) Fuisz Pharma's argument is bizarre.

Fuisz Pharma’s assertion demonstrates a fundamental misunderstanding of the difference between conceiving an invention and practicing it after someone else has patented it. In this case, Theranos will prove that it was the first to conceive certain claimed subject matter in the ’612 patent, as evidenced by numerous documents, including provisional patent applications and other confidential information to which Fuisz Pharma had improper access. But Theranos has never claimed that it made, used, sold, or offered for sale any device that practices the ’612 patent, before or after the issue date of the patent. And Fuisz Pharma has cited no such evidence. (Opp. at 9–12.) The fact that Theranos has conceived an invention, disclosed it in patent filings, or owns related patents, does not mean—or even suggest—that it has ever practiced the inventions described in those documents, let alone done so after the issue date of the ’612 patent. *See, e.g., Rite-Hite Corp. v. Kelley Co., Inc.*, 56 F.3d 1538, 1547 (Fed. Cir. 1995) (“There is no requirement in this country that a patentee make, use, or sell its patented invention.”) (internal citations omitted); *Broadcom Corp. v. Qualcomm Inc.*, 543 F.3d 683, 703–04 (Fed. Cir. 2008) (acknowledging that the patentee “does not currently practice [its own] claimed inventions”).

Fuisz Pharma’s purported support for this line of argument in the Opposition is a claim chart that Fuisz Pharma has disingenuously titled “Admissions.” The so-called “admissions” in this chart are actually nothing more than excerpts from Theranos’ Invalidity Contentions, which in turn cite to Theranos’s own prior art. (Opp. at 10–12.) Even ignoring, for the sake of argument, the critical distinction identified above between invention disclosures and actual practice thereof, the relevant dates for all of the prior art on which Theranos relies in its Invalidity Contentions also predate the date of issuance and enforceability of the ’612 patent by more than four years. (See Declaration of Lisa Nousek In Support of Reply (“Nousek Reply

1 Decl.”), Ex. A.) Under no circumstances can Theranos’s invalidity contentions be an  
2 admission regarding infringement.

3 Fuisz Pharma also spends several pages of its Opposition on an incoherent argument  
4 regarding estoppel. As we understand it, Fuisz Pharma appears to be saying that Theranos  
5 should be precluded from pursuing its non-infringement arguments, or from seeking to strike  
6 Fuisz Pharma’s Infringement Contentions, because it allegedly admitted infringement in its  
7 Amended Complaint and Infringement Contentions. (Opp. at 16–18.) For the reasons  
8 discussed above, there is no such admission or estoppel.

9 Although confusing, Fuisz Pharma also appears to suggest that Theranos admitted  
10 infringement by “abandon[ing]” an interference proceeding at the Patent Office. Fuisz Pharma  
11 fundamentally misunderstands the facts and the law. First, because the Patent Office never  
12 declared an interference, there was no interference proceeding that could be  
13 abandoned. Second, even if an interference proceeding were declared, the purpose of such an  
14 action is to have the Patent Office determine claims of *inventorship*, not infringement. *See*  
15 *Cooper v. Goldfarb*, 154 F.3d 1321, 1327 (Fed. Cir. 1998) (“When a patent application is filed  
16 which would interfere with any pending application or with any unexpired patent, the  
17 Commissioner of the PTO is authorized to declare an interference to determine which party was  
18 the first to invent the claimed subject matter.”); *Muller v. Olin Mathieson Chem. Corp.*, 240 F.  
19 Supp. 662, 664 (S.D.N.Y. 1965) (“[T]he purpose of an interference proceeding, . . . is to  
20 determine which of the parties who may rightfully make the common claim is the first  
21 inventor.”). Third, before Theranos abandoned the patent application (not interference  
22 proceeding) to which Fuisz Pharma refers, it filed another continuation application with claims  
23 that were also copied from the ’612 patent. At least one continuation application is still  
24 pending with similar claims and provides a vehicle for the Patent Office to declare an  
25 interference if it should deem such a proceeding appropriate in the future. Fourth, even if a  
26 party hypothetically were to “abandon” an interference proceeding, there could be no estoppel  
27 with regard to inventorship, much less infringement. 35 U.S.C. § 256 expressly provides an  
28 independent remedy for a federal court litigant to correct inventorship of an issued patent, and

1 as noted above, interference and infringement are conceptually unrelated. In short, Fuisz  
 2 Pharma fails to support its novel estoppel theory.

3 **B. Numerous Courts Have Stayed Discovery Where An Accusing Party's  
 4 Infringement Contentions Were Deficient.**

5 Multiple courts in this district have stayed discovery as a result of deficient  
 6 infringement contentions. *See, e.g., Shared Memory Graphics LLC v. Apple, Inc.*, 812 F. Supp.  
 7 2d 1022, 1026–27 (N.D. Cal. 2010) (staying discovery where the court found that the plaintiff's  
 8 initial Infringement Contentions were deficient because they included vague contentions and  
 9 conclusory statements that did not provide fair notice as to what components and circuitry of  
 10 the accused products infringed the plaintiff's patents); *Shared Memory Graphics*, 2011 WL  
 11 3878388, at \*8 (ordering the stay of discovery to remain in effect where the plaintiff's amended  
 12 infringement contentions continued to be deficient); *Network Caching*, 2002 WL 32126128, at  
 13 \*7 (staying discovery pending the plaintiff serving revised infringement contentions); *Bender*,  
 14 2010 WL 1135762, at \*2; *Bender*, 2010 WL 520513, at \*3; *Bender*, 2010 WL 2991257, at \*5–  
 15 6.

16 Rather than address any of these cases, Fuisz Pharma argues that infringement-related  
 17 discovery should not be stayed because: (1) Theranos initiated this lawsuit; (2) Theranos has  
 18 asserted claims against Fuisz Pharma for correction of inventorship and unfair competition, and  
 19 has sought damages for these claims; and (3) Theranos allegedly has no evidence to support its  
 20 claims. Even assuming for the sake of argument that these unsupported statements were true,  
 21 none excuse Fuisz Pharma's deficient Infringement Contentions or suggest that infringement-  
 22 related discovery should nevertheless proceed.

23 First, Theranos's initiating this lawsuit is wholly irrelevant to whether infringement-  
 24 related discovery should be allowed to proceed. Fuisz Pharma affirmatively asserts an  
 25 infringement claim against Theranos, based on the '612 patent.<sup>3</sup> It is this claim, not Theranos's  
 26

27 <sup>3</sup> Indeed, Fuisz Pharma originally filed its claim as an independent lawsuit in Delaware when  
 28 no action against it was pending there. Over its objection, the Delaware court transferred the  
 case to this Court.

1 separate claims, that triggers the obligations under Patent Local Rule 3.1 that Fuisz Pharma has  
2 failed to fulfill, and for which Theranos seeks a stay.

3 Second, infringement-related discovery is irrelevant to Theranos' claims for correction  
4 of inventorship or unfair competition. The question of who conceived the inventions of the  
5 '612 patent necessarily involves conduct that occurred *prior* to the filing of the application of  
6 the '612 patent in 2006. Infringement-related information, on the other hand, relates to conduct  
7 that took place *after* the '612 patent issued many years later. Theranos is producing responsive  
8 information and documents relevant to inventorship issues. Documents concerning Theranos  
9 products after the date the '612 patent issued are irrelevant to this issue. Likewise, Theranos's  
10 post-issuance conduct is equally irrelevant to its unfair competition claim. The unfair  
11 competition claim flows directly from Fuisz Pharma misappropriating Theranos's invention of  
12 the '612 patent. Again, the focus of this claim is on conduct that took place *prior* to the filing  
13 of the application of the '612 patent in 2006.

14 As to damages, Theranos is producing responsive documents that are relevant to  
15 damages arising under its inventorship and unfair-competition claims. To the extent that these  
16 damages-related documents may also relate to Fuisz Pharma's infringement claims, Theranos  
17 does not contend that it should be excused from producing them. Rather, due to Fuisz  
18 Pharma's deficient Infringement Contentions, Theranos argues only that it should not now be  
19 required to produce documents that relate solely to Fuisz Pharma's unsubstantiated  
20 infringement claim.

21 Relatedly, Fuisz Pharma puts much misdirected emphasis on the argument that  
22 infringement-related discovery is necessary because Theranos pleaded in the Second Amended  
23 Complaint that its ability to enjoy the '612 Patent "and inventions based thereon" has been  
24 harmed by Fuisz Pharma's actions. (Opp. at 3, 7.) But this statement is far from an admission  
25 that Theranos is currently making—or has ever made—any "inventions based" on the '612  
26 patent. Quite the opposite: Theranos claims it has been damaged by its inability to make  
27 "inventions" that practice the '612 patent because Fuisz Pharma misappropriated Theranos's  
28 ideas. In short, this statement communicates nothing about Theranos's practice of the '612 (or

1 lack thereof), but rather complains that Theranos has lost its rightful ability to do so.

2 In summary, Theranos's Invalidity Contentions overwhelmingly demonstrate that its  
3 affirmative claims are well-founded. But in any event, the presence or absence of evidence in  
4 support of Theranos's claims has no bearing on Fuisz Pharma's own compliance with the  
5 Patent Local Rules and the consequences that flow from its failure to meet those obligations.  
6 In light of the fundamental failures in Fuisz Pharma's Infringement Contentions, Theranos  
7 should not be forced to bear the costs of infringement-related discovery.

8 **III. CONCLUSION**

9 For the reasons stated above and in Theranos' opening brief, the Court should strike  
10 Fuisz Pharma's Infringement Contentions and stay discovery relating to infringement.
